

Trenton Gibson

Brand guide, Evergreen. Version 1, October 2026.

The personal brand of Trenton Gibson, #33: an American pro basketball player in his fourth season overseas, currently in Germany, after four years of D-II. The brand is the inside of a hooper's head. Ideas, film and lessons gather like particles, connect like nodes, and settle into something clear.

Who it's for and how it sounds

The audience is hoopers, mostly high school and college players, who want the truth about the game and about the pro life overseas. Content covers training philosophy, life as an overseas pro, shoe reviews from real games, and EuroLeague and NBA takes.

The voice is a player talking to players. Direct, opinionated, calm. Never a guru, never hype.

- Say the specific thing: "Your first step decides the play," not "Unlock elite footwork."
- Sentence case everywhere. No tracked-out capitals, no code-style labels like "NOTE 014". They read as machine-made, and this brand is a person.
- Short first line, quieter second line. The second line explains or turns the first.

Visual foundations

Calm and deep. A near-black ground with a hint of forest, rich jewel colors used as fields rather than decoration, a refined serif for anything that should land, and a plain sans for everything else. Lots of empty space. Nothing slams in.

Logo

Two marks, both delivered as vector files in the Logos group (bone, night and forest, each as SVG and PNG).

- **The portrait** is the primary mark: a single-line drawing of Trenton looking up. Use it for intros, end cards, shirt fronts, the YouTube banner and the media kit.

- **The TG monogram** is a stacked Garamond T and G, with the T centered over the G and its stem cut into the G's bowl. Use it where the portrait would be too detailed: avatars, watermarks, a chest or sleeve print, favicons.
- They can sit side by side (portrait left, monogram right) or stand alone. Never stack the monogram on top of the portrait.
- Bone on **night**, **forest**, **plum** or **oxblood**; night on **bone**. Nothing else, and no outlines, shadows, gradients or glow on the marks themselves.
- Keep clear space of at least half the monogram's width all around. Monogram minimum size is 24px on screen and 12mm in print.

Color

Evergreen: forest leads, plum supports, oxblood is the rare accent, on night and bone.

- **ground** (night) carries most of every screen layout. **forest** is the lead brand color and the main title-card field.
- **forest-glow** is the living color: particles, nodes and connection lines. It is the only bright color on a dark frame, so keep it small.
- **plum** is for panels and note cards. **oxblood** marks the one thing that matters in a frame, at most once per frame.
- The three jewel colors are close in lightness. Never put two of them side by side as text and background. Text on any of them is **bone**.
- **forest** on **night** is only 1.6:1. Use it there as a big field, never as text or thin lines.

Shirts follow different rules than screens. Forest, plum and oxblood are each a full colorway, and every one prints in **bone**. Use the portrait on the front and the monogram on the chest or sleeve.

Type

- **display** and **title** use Cormorant Garamond at weight 500, matching the monogram. Use them for titles, thumbnails, note cards and anything meant to land.
- **heading**, **body**, **small** and **caption** use Inter. Use them for supporting lines, documents and captions.
- The signature title is two lines: the first line in **ink**, and the second line in **ink-muted**, either the same size or one step down.
- Two families only. Don't add a mono, a condensed sports face or a script.

Motion: seed, then materialize

Every graphic arrives the same way. It starts as a **seed** of particles in **forest-glow**, the particles gather, and then they settle into the final form. The motion is calm, physical and unhurried.

Seeds, chosen per video:

- **Clump**: one soft cloud of particles. This is the calmest seed and the default.
- **Network**: a few clusters joined by hairlines, for breaking down ideas, film or decisions. It doesn't always have to be connected.
- **Basketball**: the particles first trace a ball, a rim or court lines.

Into whatever the moment needs: the portrait, a title, a stat, a note card, or a frame of a clip.

Timing (1080p, 30 or 60fps):

- Gather: 1.6 to 2.0s, ease-out.
- Settle into the final form: 1.8 to 2.4s, ease-in-out, with each particle a little out of step (up to 0.5s) so it feels organic.
- Text and cards fade in from an 8px blur over 1.2s, ease-out, starting as the particles settle.
- Hold the final frame for at least 2 seconds. Exits run the same steps in reverse, at about two-thirds of the speed.
- Particles drift by about 2px while loose, and stop drifting once settled.
- No snaps, bounces, zooms, flashes or whooshes.

The **Materialize** card on this page plays every seed, so you or an editor can watch the exact timing.

Layout

- Keep a 40px safe margin inside a 1080p frame (**space-5**) and at least 64px of air around the logo (**space-6**).
- Use one idea per frame: a title, a note card or a stat, never all three.
- Use borders, not shadows. Panels are **ground-raised** or **plum** with a **hairline** border and **radius-md**.
- Use real photos and game footage only, never stock images.

Iconography

There is no icon set. When a graphic needs a symbol, build it from the particles themselves: a ball, a rim or court lines drawn in **forest-glow**. Never use emoji, clip art or sports-icon packs.

Logo files

Color tokens

forest #24402F

The brand color. Lead shirt colorway, title-card grounds, big color fields. Bone text on forest is 9.2:1. On the night ground it sits close in lightness (1.6:1), so never use it for text or thin lines there.

particle #8CC4A4

Fixed glow for particles and nodes that sit on night, forest or plum, in either theme (9.3:1 on night, 4.1:1 on forest). On a bone ground use forest-glow instead.

plum-soft #C9BFD0

Supporting text and lines that sit on or next to plum.

oxblood-soft #D9A0A6

Oxblood when it has to be read as text or a thin line on the ground (8.4:1 on night).

ground-raised #161F1A

Panels and cards on the ground.

forest-glow #8CC4A4

The living color: particles, nodes and connections, small highlights. 9.3:1 on night, 6.2:1 on bone. Never a large fill.

plum #4B2742

Second color. Note-card panels, the second shirt colorway. Bone text on plum is 10.2:1.

oxblood #6B1D27

The rare accent: the one thing that matters in a frame, such as a key stat or a 'this is the mistake' moment. At most one oxblood element per frame. Third shirt colorway.

ground #0E1511

Page and video background. Night is near-black with a hint of forest, so every frame leans green.

ink #EEE7D8

Primary text and the logo on the ground. Bone on night is 15:1.

ink-muted #A3A89F

The dimmed second line of a title, supporting copy, captions. 7.6:1 on night, 6.5:1 on bone.

bone #EEE7D8

Fixed bone: the print ink on every shirt colorway, and the logo on forest, plum or oxblood in both themes.

night #0E1511

Fixed night: the video ground and the logo on bone, regardless of theme.
